Innovative rifle scope with 10x magnification

The first 10x magnification in the premium range makes the Ranger 10 the most versatile riflescope on the market. Especially when the distance of the target changes quickly, the flexibility of the Ranger 10 means you are always well positioned.

Extremely versatile

Regardless of whether it is a driven hunt situation in an open area or a stalk in the forest where you have to act flexibly between close and medium distances, the Ranger 10 is always a guarantee for hunting success. This is also expanded to include space for mounting attachments such as the Nighthunter C35.

True to detail image thanks to real 1x magnification

The Ranger 10 overcomes the challenge of optical distortion thanks to true 1x magnification, ensuring absolutely precise and lifelike imaging. This ensures that the view through the rifle scope is the same as with the naked eye, without any annoying distortions.

HD optics with transmission values of 92%+

Ensures bright, brilliant and high-contrast images with high edge sharpness, outstanding detail recognition and a large eyepiece. The light transmission is over 92%, ensuring reliably bright images through outstanding optical performance.

Extreme robustness

High bullet resistance thanks to durable materials and precise, reliable construction. The excellent mechanical properties of the Ranger series always ensure precise and reliable movement of the adjustment towers. Pressure-water tightness thanks to special sealing techniques - even without cover caps on the adjustment towers. No dust, dirt or moisture can penetrate inside. Fogging up or the formation of condensation inside is ruled out with the STEINER nitrogen filling.

Reviews

As an innovation leader in the field of hunting optics, we can now expand our popular and globally successful Ranger series with the first rifle scope with 10x magnification in the premium segment. Constantly looking for how we can make our customers' hunting experience even more user-friendly and successful, in the Ranger 10 we combine maximum flexibility in magnification with the short design of a driven hunt rifle scope, which enables problem-free and comfortable handling with thermal imaging attachments such as the Nighthunter C35.

The true 1x magnification and a wide field of view of 38m at 100m make the Ranger 10 the perfect rifle scope for quick shooting at short and medium distances. These extremely flexible features make the Ranger 10 the most versatile rifle scope on the market, with which you can master any challenge - whether on a driven hunt or while stalking.

The outstanding HD optics ensure bright, brilliant and high-contrast images with high edge sharpness and the large eyepiece means you are particularly quick to attack on driven hunts and can capture your target in a matter of seconds. This outstandingly innovative rifle scope not only combines perfect optical quality with precise mechanics and the usual Steiner robustness, it also enables a quick response to quickly changing distances in every situation.
