

## Method 2A

### For Reindeer and Caribou

#### Rank on the length of the longest antler.

1. Measure the length of each antler on the outside curve from the lowest edge of the burr (coronet) to the tip of the longest beam of the crown (A–B). The tape must not be pressed into the groove above the coronet.
2. Measure the circumference of the burr of each antler (C).
3. Measure the circumference of each antler at the smallest place between the second and third tines (D).
4. Measure the circumference of the upper palm of each antler at its largest place (E).
5. Measure the widest inside span of the antler beams at right angles to the long axis of the skull (F).
6. Count the total number of points of 1 inch (or 2.5 cm) or more in length.
7. Weigh the dry rack attached to the skull, however without lower jaw (optional).
