

## Method 4

### For palmated Moose and Giant Deer

#### Rank on the greatest spread of the antlers.

1. Measure the greatest spread of the antlers in a straight line at right angles to the axis of the skull (X-Y).
2. Measure the circumference of each main antler beam at the smallest point (C).
3. Measure the length of each palm along the outer curve from the highest point on the upper edge to the lowest point on the lower edge (D).
4. Measure the width of each palm along the outer curve at the widest place between protuberances, the measurement being taken along the axis of the palm (E).
5. Count the number of points 1 inch (or 2.5 cm) or more in length.
6. Weigh the dry rack attached to the skull, however without lower jaw (optional).
