

## Method 4A

### For unpalmated Moose

#### Rank on the greatest spread of the antlers.

1. Measure the greatest spread of the antlers in a straight line at right angles to the axis of the skull (X-Y).
2. Measure the circumference of each main antler beam at the smallest point (C).
3. Measure the length of each antler on the outside curve from the lowest edge of the burr (coronet) to the tip of the main beam (A-B). The tape must not be pressed into the groove above the coronet.
4. Measure the length of each tine and record the total length of all tines.
5. Count the number of points 1 inch (or 2.5 cm) or more in length.
6. Weigh the dry rack attached to the skull, however without lower jaw (optional).
