

## Method 6

### For Babirusa, Walrus, Water Deer, Musk Deer and Chevrotain

Rank on the length of the longest tusk.

1. Measure the length of the upper tusks on the outer curve (this includes the portion in the gum) (A–B).
2. Measure the length of the upper tusks protruding from the gum (on the outer curve). N.B. Whilst the normal 30 day drying period applies for measurement 1, this is not the case with measurement 2 and a field measurement is acceptable.

Length of tusk (A–B)
