

Method 13

For Black Wildebeest (White-tailed Gnu)

Rank on the length of the longest horn.

Use a carpenter's square to determine the right angle (CDE). The line (CD) is parallel to the center line of the skull and will touch the boss (vertical). The line (DE) is at right angles to the axis of the skull and will touch the lowest point of the boss (horizontal).

1. Bisect the angle (CDE) at 45° in the direction of (F). The point where this line meets the boss (A) is the starting point for the length of each horn. Follow the grain of the horn over the ridge of the boss and then start to incline to the front of the horn, around the lowest point and up the front to the tip (A-B).
2. Measure the width of each boss beginning where the horn meets the skull in front and going over the highest point of the boss to end where the horn meets the skull at the back (H). This is NOT circumference measurement.
3. Measure the spread, tip to tip (G-B).

Length of horn (A-B)

Width of boss (H)

Tip to Tip (G-B)

*To Be Filled Out by Measurer:

Species _____

Date Measured ____/____/____ (DD/MM/YYYY)

*Measurer's Information: (Please print if handwritten.)

First _____ Last _____ Country _____

Tel. (INT) (____) _____ Email _____

Signature _____

*To Be Filled Out by Owner of Trophy:

Country _____

Date Shot ____/____/____ (DD/MM/YYYY)

Nearest town/Area _____

*Enclosed area: Yes No

Rifle Muzzleloader Handgun Bow/Crossbow Picked up

*Owner's/Hunter's Information: (Please print if handwritten.)

First _____ Last _____

Address 1 _____ Address 2 _____
