

## Method 14B

### For Markhor

#### Rank on the sum of measurements 1 and 2.

1. Measure the length of each horn around the spiral, keeping the tape on top of the spiral ridge, starting at the lowest point at the front of the base and proceeding to the tip (A-B). Where the spiral ridge ends near the tip, proceed to the tip and do not continue to spiral.
2. Measure the circumference of each horn at the base (C) at right angles to the axis of the horn.
3. Measure the greatest outside spread (X-Y).
4. Measure the spread, tip to tip (G-B).
5. Add the length and circumference of both horns to establish a total.

Length of horn (A-B)	Right	Left	
Circumf. of horn (C)	Right	Left	
Greatest spread (X-Y)			
Tip to Tip (G-B)
